customers in
7 municipalities
in 2 counties.**

Where Does Your Water Come From?

Forest Park Water, which is jointly owned by North Wales and North Penn Water Authorities, consists of a 96 million gallon per day raw water pumping station on the Delaware River at Point Pleasant and transmission mains which discharge the Delaware River water into the North Branch of the Neshaminy Creek. Once discharged, the water flows down the Neshaminy Creek through Lake Galena. From its inception, one of the purposes of the project was to supplement the water in Lake Galena for recreational uses.

Our Treatment Process

This water has also helped to significantly improve water quality in the North Branch Neshaminy Creek as well as Lake Galena. The water released from Lake Galena flows two miles downstream to the Forest Park Water Treatment Plant located in Chalfont, Pennsylvania. From the treatment plant, the North Wales and North Penn Water Authorities individually take their share of the supply for distribution within their respective service areas. Currently, 85% of our water comes from the Delaware River and 15% comes from ground water sources.
